

**Dr. Samraj J Gaddam**

OTR/L, SIPT Certified, DTT, CBT, Behavior Management  
Post-Professional Pediatric Program – Tufts University, Boston  
Member – U.S. Honors Society

Pediatric Occupational Therapist  
Clinical Director  
Super S.T.A.R.S. Child Research and Development Center

As Clinical Director at Super S.T.A.R.S., I bring more than two decades of experience in pediatric occupational therapy, with an unwavering passion for improving the lives of children with developmental and behavioral needs. My journey began at Christian Medical College (CMC), Vellore, where I received foundational training in occupational therapy and developed a deep commitment to evidence-based, compassionate care.

Over the years, I have pursued multiple advanced certifications—ranging from Sensory Integration and Discrete Trial Training (DTT) to Cognitive Behavioral Therapy (CBT) and Behavior Management—equipping me to lead interdisciplinary teams and support diverse therapeutic needs. My academic path continued at Tufts University in Boston, where I completed the Post-Professional Pediatric Program and became a proud member of the U.S. Honors Society.

Before joining Super S.T.A.R.S., I served as a Gazette Officer in the Department of Public Health at Osmania Medical College. There, I witnessed firsthand the challenges families face

navigating complex systems with limited guidance and fragmented support. That experience shaped my dedication to creating integrated, family-centered services that honor each child's unique journey.

At Super S.T.A.R.S., I lead our clinical team in setting high standards for therapy delivery, professional development, and collaborative care across disciplines. My vision is to ensure that every child receives holistic, individualized support—grounded in science, delivered with empathy, and designed to empower families at every stage.

Beyond the clinic, I remain committed to professional education and advocacy, regularly contributing to national and international training initiatives and community awareness programs. I believe that true progress lies in combining clinical excellence with a heart-led mission—and that every child, when supported with the right tools and belief, can shine brilliantly.
